

Netflix Data Analysis Project Presentation

1: Title

Title: Netflix Data Analysis Project

Subtitle: Cleaning, Analyzing & Visualizing Netflix Data using MySQL & Excel

Presented by: Shivam Patel

2: Introduction

- Netflix is a leading global streaming service with a vast content library.
 - This project aims to analyze Netflix data by:
 - Cleaning raw data using **MySQL**.
 - Identifying duplicate and missing values.
 - Performing data analysis to extract insights.
 - Visualizing findings in **Excel**.
-

3: Problem Statement

- The dataset contains:
 - Missing values in fields like **director** and **country**.
 - Duplicate records that can affect analysis accuracy.
 - Inconsistent formats in date, duration, and rating columns.
- Goals:
 - **Clean and preprocess** the data using MySQL.
 - **Analyze and visualize** trends in Netflix content.

4: Data Cleaning Using SQL Queries

Handling Missing Values.

- Standardized date formats for consistency.

SQL Query:

```
CREATE TABLE netflix_cleaned AS
SELECT
    show_id,
    type,
    title,
    director,
    country,
    STR_TO_DATE(date_added, '%m/%d/%Y') AS date_added,
    release_year,
    rating,
    Coalesce(CASE
        WHEN duration LIKE '%min' THEN
            CAST(SUBSTRING_INDEX(duration, ' ', 1) AS
                UNSIGNED)
            ELSE NULL
        END, 0) AS duration_min,
    Coalesce(CASE
        WHEN duration LIKE '%Season%' THEN
            CAST(SUBSTRING_INDEX(duration, ' ', 1) AS
                UNSIGNED)
            ELSE NULL
        END, 0) AS num_seasons,
    listed_in
FROM netflix1;
```

5: Checking for Duplicate Values

Finding Duplicate Entries

SQL Query:

```
SELECT show_id, title, COUNT(*) AS duplicate_count
FROM netflix_cleaned
GROUP BY show_id, title
HAVING COUNT(*) > 1;
```

- No duplicate records were found in the dataset.

6: Data Analysis Using SQL Queries

Top 10 Countries with Most Content

```
SELECT country, COUNT(*) AS total_shows
FROM netflix_cleaned
GROUP BY country
ORDER BY total_shows DESC
LIMIT 10;
```

Most Popular Genres

```
SELECT listed_in, COUNT(*) AS genre_count
FROM netflix_cleaned
GROUP BY listed_in
ORDER BY genre_count DESC
LIMIT 10;
```

Trend of New Content Over the Years

```
SELECT release_year, COUNT(*) AS total_releases
FROM netflix_cleaned
GROUP BY release_year
ORDER BY release_year ASC;
```

Average Movie Duration

```
SELECT ROUND(AVG(duration_min), 2) AS avg_movie_duration
FROM netflix_cleaned
WHERE type = 'Movie';
```

7: Data Visualization in Excel

Key Visualizations Created:

- ✓ **Bar Chart:** Top 10 countries with the most Netflix content.
 - ✓ **Bar Chart:** Distribution of Netflix content by genre.
 - ✓ **Line Chart:** Trend of new Netflix content releases.
 - ✓ **Bar Chart:** Average movie duration.
-

8: Key Insights & Results

- **USA leads** with the highest number of Netflix shows.
 - **Drama and Comedy** are the most common genres.
 - **Increase in Netflix content** releases after 2015.
 - **Average movie duration** is around **99.73 minutes**.
-

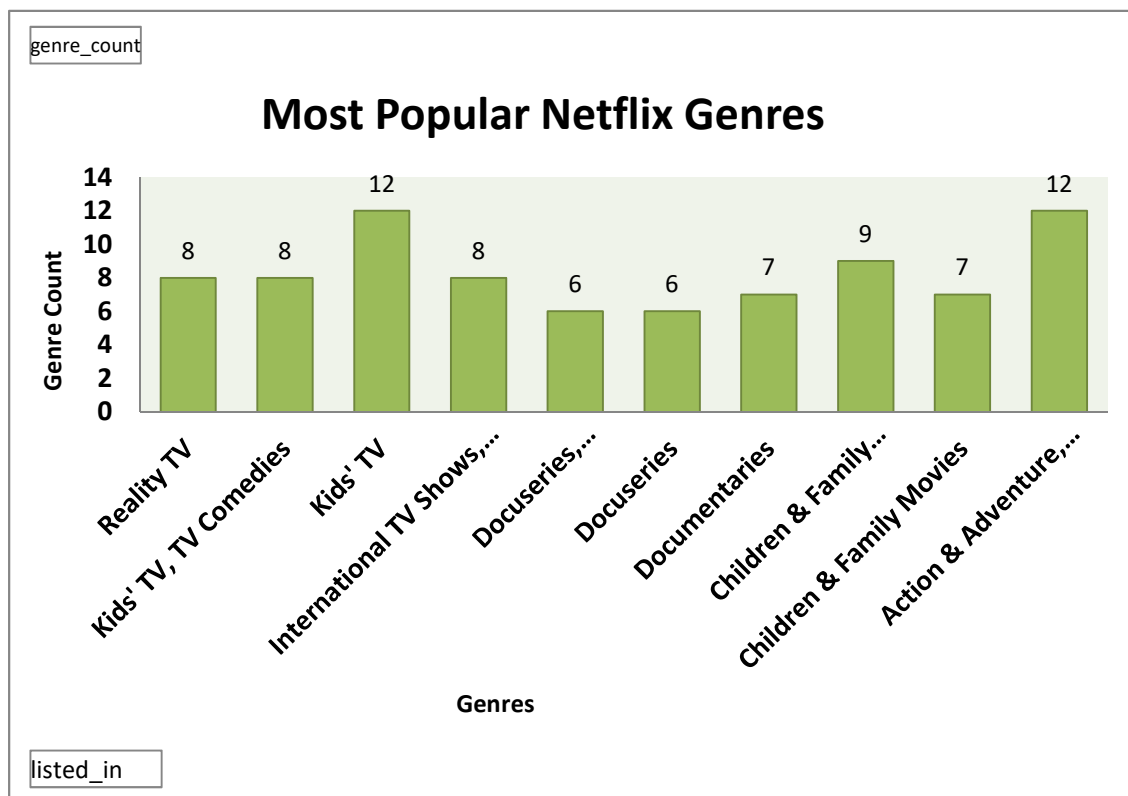

9: Conclusion

- Netflix content is highly concentrated in specific regions and genres.
- **SQL helped clean and analyze** the data efficiently.
- **Excel provided clear visual insights** into content trends.
- This project showcases skills in **data cleaning, SQL analysis, and Excel visualization**.

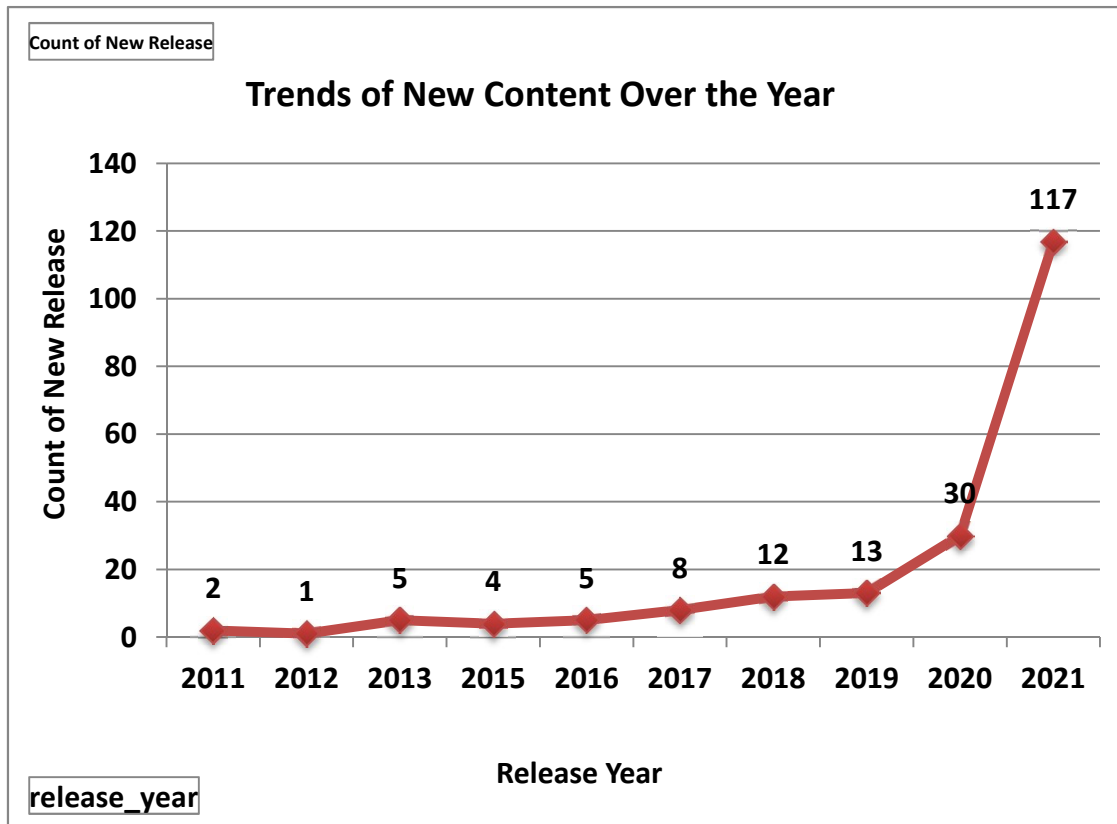

Country	Total_shows
United States	68
United Kingdom	7
South Africa	3
Pakistan	124
Not Given	20
